

Internship Report

Of

DESIGN, DEVELOPMENT AND DEPLOYMENT OF CRM AND HRMS WEB PORTALS AT IMPOST INDIA PRIVATE LIMITED

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

Roll Number of Student: 25SCS1003000963

Name of Student: AADISH JAIN

Batch: 2025-29

CANDIDATE'S DECLARATION

I, AADISH JAIN, do hereby declare that the internship report titled "DESIGN, DEVELOPMENT AND DEPLOYMENT OF CRM AND HRMS WEB PORTALS AT IMPOST INDIA PRIVATE LIMITED" has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own work and has not been submitted to any other institute for any degree/diploma requirement, and I shall be solely responsible for any kind of copyright violation in this regard.

Roll No.: 25SCS1003000963

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the internship program at IMPOST INDIA PRIVATE LIMITED. I am thankful for their aspiring guidance, invaluable constructive criticism, and friendly advice during the course of this work.

I express my sincere gratitude to Mr. Prateek Jain, Managing Director, IMPOST INDIA PRIVATE LIMITED, for granting me the opportunity to undertake this internship and for his continuous encouragement and support in helping me understand the practical, real-world requirements of the organization's Customer Relationship Management (CRM) and Human Resource Management System (HRMS) portals.

I would also like to thank the School of Computer Science and Engineering, IILM University, Greater Noida, for providing me with the academic foundation and the opportunity to pursue this internship as a part of my B.Tech curriculum, and for their timely guidance throughout the preparation of this report.

Finally, I express my heartfelt gratitude to my parents and family for their constant blessings, encouragement, and support throughout this journey.

CHAPTER 4: PROJECT DESCRIPTION

4.1 Introduction

This report presents a detailed account of the internship undertaken at IMPOST INDIA PRIVATE LIMITED, a private business-solutions organization operating under the brand identity "IMPOST INDIA - Business Care Taker Kendra". The internship was carried out over a period of two months, from 5 June 2026 to 5 August 2026, under the overall guidance and supervision of Mr. Prateek Jain, Managing Director of the organization. Upon successful completion, the intern was awarded a Certificate of Internship recognizing the role of "Artificial Intelligence & Information Technology Intern", in acknowledgement of the technical and software-development contribution made during the internship period.

Table 4.1: Internship Details

Item	Details
Organisation	IMPOST INDIA PRIVATE LIMITED
Internship Role	Artificial Intelligence & Information Technology Intern
Internship Period	5 June 2026 - 5 August 2026
Student	AADISH JAIN
Roll Number	25SCS1003000963
Academic Programme	B.Tech CSE

During the course of the internship, the organization identified an internal need to digitize and streamline two of its core operational functions - customer/lead management for its sales and telecalling team, and human resource administration for its multi-branch workforce. As the assigned Artificial Intelligence & Information Technology Intern, the primary responsibility undertaken was the end-to-end design and front-end development of two independent, purpose-built web-based software portals: a Customer Relationship Management (CRM) Portal for the sales and telecalling department, and a Human Resource Management System (HRMS) Portal for the HR/Admin department. Both systems were conceived, wireframed, and developed as fully interactive, realistically populated static web prototypes intended to demonstrate the complete intended functionality of each system prior to backend and database integration.

It is worth noting that while the intern's day-to-day HR records (attendance and reimbursement entries visible within the developed HRMS itself) list the assigned

designation as "Core Marketing Intern" - a reflection of the informal departmental placement common in small and growing private organizations - the substantive work carried out, and the designation formally certified by the Managing Director, was technical in nature, encompassing requirement analysis, UI/UX design, and front-end software development.

This report is submitted in partial fulfilment of the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering at the School of Computer Science and Engineering, IILM University, Greater Noida, U.P. It documents the organizational context, the problems addressed, the objectives and scope defined for each portal, the technologies and system architecture adopted, the development methodology followed on a module-by-module basis, and the outcomes and learning gained through the internship.

4.2 Organization Profile

IMPOST INDIA PRIVATE LIMITED is a privately held business-solutions organization that operates under the consumer-facing brand "IMPOST INDIA - Business Care Taker Kendra". Based on the service categories actively tracked within the organization's own internal CRM system - namely Website Development, SEO (Search Engine Optimization) Packages, CRM Setup, and Digital Marketing - the organization functions primarily as a digital-services and business-support consultancy, assisting small and medium-sized client businesses (such as local traders, boutiques, and enterprises) in establishing and growing their online and operational presence.

The organization operates across multiple branch locations, including offices at Barwani, Indore and Khargone in Madhya Pradesh, indicating a multi-city operational footprint. Internally, the organization is structured into functional departments including the Marketing Unit (responsible for lead generation, client outreach, and telecalling), the Back Office (responsible for administrative and coordination support), and Tech Engineering (responsible for the organization's technical and software requirements). The organization is led by Mr. Prateek Jain, who holds the position of Managing Director and Authorized Signatory, and who directly supervised the internship and the deliverables discussed in this report.

Table 4.2: Organization Branches and Departments - IMPOST INDIA PRIVATE LIMITED

Branch / Department	Type	Details
Barwani Office	Branch Location	Regional office - Madhya Pradesh
Khargone Office	Branch Location	Regional office - Madhya Pradesh
Indore Office	Branch Location	Regional office - Madhya Pradesh
Marketing Unit	Department	Lead generation, telecalling, and client servicing
Back Office	Department	Administrative and support operations
Tech Engineering	Department	Technical / software development function

This organizational structure directly shaped the design of both portals developed during the internship: the CRM Portal was designed around the workflows of the Marketing Unit's telecalling and lead-conversion process, while the HRMS Portal was designed to give the Back Office / Admin function centralized, branch-wise visibility and control over attendance, leave, reimbursements, and staff communication across all office locations.

4.3 Problem Statement

Prior to the development of the two portals discussed in this report, several operational gaps were identified across the organization's sales and human-resource functions. These gaps formed the basis and justification for undertaking the design and development work described in this report.

4.3.1 Problem Statement - CRM Portal

The Marketing Unit's lead-generation and telecalling activities - spanning enquiries received from the website, Instagram, referrals, WhatsApp campaigns, and walk-ins - lacked a single, unified system for tracking a lead's progress from first contact through to conversion. Follow-up calls, demos, and proposal reviews were being tracked in a fragmented manner, resulting in missed or overdue follow-ups, no centralized visibility of daily call outcomes or agent performance, and no structured call-script or objection-handling reference for telecallers. Sales management additionally had no consolidated dashboard through which to monitor pipeline value, conversion rate, or lead-source effectiveness in real time.

4.3.2 Problem Statement - HRMS Portal

On the human-resource side, attendance marking, leave applications, reimbursement claims, and internal employee grievances were being handled through manual or disconnected methods across the organization's three office branches (Barwani, Khargone, and Indore). This resulted in delayed approvals, absence of a single audit

trail for HR decisions, and no real-time, branch-wise visibility for the Admin/HR function into staff presence, pending requests, or open complaints. There was also no structured channel through which HR/Admin could broadcast notifications or alerts to specific employees or departments.

4.4 Project Objectives

4.4.1 Objectives - CRM Portal

- To design a unified, stage-wise Lead Pipeline Board covering the complete lead lifecycle - New, Contacted, Interested, Proposal Sent, Converted, and Lost.
- To build a dedicated Follow-Up Management workspace that classifies tasks as Due Today, Overdue, Completed, and Upcoming, with priority and ownership tagging.
- To provide a visual, calendar-based scheduling view of all follow-ups, demos, and payment reminders across the sales team.
- To create a caller-focused Telecalling Workspace integrating call queue, lead context, call scripts, objection-handling guidance, and call-disposition capture in a single screen.
- To provide a Call Logs and Reporting module offering agent-wise performance metrics, call-outcome analysis, and exportable reports for sales management.

4.4.2 Objectives - HRMS Portal

- To centralize attendance tracking and reporting across all office branches into a single administrative dashboard.
- To streamline leave-request and reimbursement-claim workflows with clear approve/reject actions and status tracking.
- To provide a structured internal complaint/grievance ticketing mechanism with priority and status tagging.
- To enable HR/Admin to broadcast targeted notifications and alerts to individual employees or entire departments.
- To maintain a centralized, searchable employee directory covering staff details, attendance history, bank details, salary information, leave balances, and access permissions.

4.5 Scope of the Project

4.5.1 Scope - CRM Portal

The scope of the CRM Portal, as developed during this internship, covers the complete front-end user-interface design and static prototype development of five core modules: the Lead Pipeline Board, Follow-Up Management, Follow-Up Calendar, Telecalling Workspace, and Call Logs & Reports. The prototype is populated with realistic, representative sample data (leads, contacts, call notes, and revenue figures in Indian Rupees) to accurately demonstrate intended real-world behaviour. Backend database integration, live telephony/dialer integration, user authentication, and production deployment are identified as subsequent phases and are outside the scope of the work completed during this internship.

4.5.2 Scope - HRMS Portal

The scope of the HRMS Portal covers the front-end design and static prototype development of seven administrative modules: the HR Operations Dashboard, Attendance Controls, Pending Requests (covering leave, reimbursement, and complaints), the Office Calendar / Schedule Manager, the Employee Notification Center, the Employee Directory, and system Settings. As with the CRM Portal, the HRMS prototype uses realistic sample employee, attendance, and request data to demonstrate the intended administrative workflow. Backend/database persistence, role-based authentication, payroll processing, and biometric attendance-hardware integration are considered future-phase requirements and fall outside the current scope.

4.5.3 Limitations of the Available Artifacts

The project files available for this report, for both the CRM Portal and the HRMS Portal, are front-end prototypes built using HTML, CSS, and JavaScript. These files demonstrate the complete intended user interface, information architecture, and workflow of each system, but they do not evidence a production backend, a live database, a deployed authentication system, or integration with real telephony, payment, or biometric hardware. This report therefore treats both deliverables as fully designed static prototypes rather than claiming production deployment.

Similarly, sample figures shown within the prototypes - such as lead counts, conversion rates, revenue values, attendance numbers, and employee records - are illustrative content used to demonstrate how each screen would behave with real data, and should not be interpreted as independently verified, live organizational figures. This distinction is made explicit here so that the report clearly separates what was designed and

demonstrated during the internship from what would require a subsequent backend-development phase to operate as a production system.

4.6 Technologies and Tools Used

Both portals were developed using standard, industry-relevant front-end web technologies, chosen to allow rapid prototyping of realistic, production-quality interfaces without requiring backend infrastructure at this stage. Table 4.3 and Table 4.4 summarize the technologies used in the CRM Portal and the HRMS Portal respectively.

Table 4.3: Technology Stack Used - CRM Portal

Technology / Tool	Purpose in the CRM Portal
HTML5	Semantic structure and markup of all five CRM modules
CSS3 (Custom Properties)	Design-token based theming (colors, spacing, shadows) via CSS variables
CSS Flexbox & Grid	Responsive card, badge, and pipeline-column layouts
Vanilla JavaScript	Planned interactivity for filters, lead movement, and disposition capture
Responsive Web Design	Layout designed to remain usable across desktop and tablet widths

Table 4.4: Technology Stack Used - HRMS Portal

Technology / Tool	Purpose in the HRMS Portal
HTML5	Semantic structure of the dashboard and all administrative modules
Tailwind CSS (via CDN)	Utility-first styling for rapid, consistent UI development
Vanilla JavaScript	Page/tab switching logic between Dashboard, Attendance, Requests, etc.
Lucide Icon Library	Scalable vector icon set used across the sidebar and action buttons
Google Fonts (Plus Jakarta Sans)	Primary typography for a clean, modern administrative interface
Responsive Sidebar Layout	Fixed navigation sidebar with a scrollable main content workspace

The CRM Portal was built using hand-written, custom CSS with a design-token (CSS variable) approach, giving fine-grained control over the pipeline-board and card-based visual style. The HRMS Portal, in contrast, was built using the Tailwind CSS utility framework, which allowed faster iteration across the larger number of administrative screens (seven modules) while maintaining visual consistency through a shared color and spacing configuration.

In line with current industry practice, AI-based coding assistants were used throughout the development process as productivity and problem-solving aids rather than as a

replacement for design decision-making. Table 4.5 summarizes the AI tools used and their role during development of the CRM and HRMS portals.

Table 4.5: AI Tools Used During Development

AI Tool	Role in Development Process
Claude (Anthropic)	Code generation support, HTML/CSS structuring assistance, and debugging of interactivity across both portals
ChatGPT (OpenAI)	Drafting and refining component logic, troubleshooting layout/CSS issues, and iterating on copy/labels
Gemini (Google)	Cross-checking implementation approaches and generating alternative UI/content suggestions for comparison

These AI tools were primarily used to accelerate routine coding tasks - such as generating boilerplate HTML/CSS structures, suggesting fixes for layout and responsiveness issues, and refining interface copy - while all architectural decisions, module design, information structuring, and final UI choices for the CRM and HRMS portals remained the intern's own work, reviewed and adapted to fit the organization's specific requirements.

4.7 System Architecture

Although the deliverables completed during this internship are front-end static prototypes, both systems were designed with a clear target system architecture in mind, so that backend and database integration can be added in a subsequent development phase without requiring a redesign of the user interface. Both portals follow a conventional three-tier architecture consisting of a Presentation Layer, an Application / Business Logic Layer, and a Data Layer, as illustrated in Figure 4.1 and Figure 4.2.

Figure 4.1: Proposed System Architecture - CRM Portal

In the CRM Portal's proposed architecture, the Presentation Layer corresponds to the five developed modules (Lead Pipeline Board, Follow-Up Management, Calendar, Telecalling Workspace, and Call Logs). These would be served by an Application Layer responsible for pipeline-stage transitions, follow-up scheduling logic, call-disposition handling, and reporting/analytics computation, which in turn would persist and retrieve data from a Data Layer consisting of dedicated Leads, Follow-ups, Call Logs, and User/Owner master-data stores.

Figure 4.2: Proposed System Architecture - HRMS Portal

Similarly, the HRMS Portal's proposed architecture places its seven administrative screens in the Presentation Layer, backed by an Application Layer covering attendance/shift computation, leave and reimbursement workflow rules, notification dispatch, and complaint/grievance handling, which would interface with a Data Layer comprising an Employee Master database, Attendance Logs, Leave & Claims records, and a Complaints/Tickets store. This layered approach ensures that the CRM and HRMS front-ends developed during the internship can be connected to a real database and authentication system with minimal structural change.

4.8 Methodology

The development of both the CRM Portal and the HRMS Portal followed a structured, iterative front-end development methodology consisting of five broad stages: (i) requirement understanding through discussion of existing manual workflows, (ii) UI/UX wireframing of each module's layout and information hierarchy, (iii) module-wise static prototype development using HTML, CSS, and JavaScript, (iv) internal review and feedback incorporation, and (v) consolidation, cross-module consistency

refinement, and documentation. Table 4.6 summarizes the approximate week-wise progression of work across the two-month internship period.

Table 4.6: Week-wise Work Summary during Internship

Week(s)	Duration	Work Summary
Week 1-2	5 Jun - 18 Jun 2026	Orientation, understanding of organizational workflow, requirement discussions for the CRM and HRMS portals, and wireframing of core screens.
Week 3-5	19 Jun - 9 Jul 2026	Design and static development of the CRM Portal - Lead Pipeline Board, Follow-Up Management, Follow-Up Calendar, Telecalling Workspace, and Call Logs modules.
Week 6-8	10 Jul - 30 Jul 2026	Design and static development of the HRMS Portal - HR Dashboard, Attendance Controls, Pending Requests, Notification Center, Employee Directory, Calendar, and Settings modules.
Week 9	31 Jul - 5 Aug 2026	Internal review, refinement of UI consistency across both portals, testing across screen sizes, and preparation of project documentation.

The following sub-sections describe each of the developed modules individually - five modules under the CRM Portal and five representative administrative modules under the HRMS Portal - along with the corresponding screen captured from the developed prototype.

4.8.1 CRM Portal - Module-wise Description

The CRM Portal was designed as a combined, multi-page interface for the sales and telecalling team, consisting of five interlinked modules described below.

4.8.1.1 Lead Pipeline Board

The Lead Pipeline Board (Figure 4.3) is the primary sales-visibility screen of the CRM Portal. It presents every prospect in a Kanban-style, stage-wise layout across six pipeline stages - New, Contacted, Interested, Proposal Sent, Converted, and Lost - with each lead rendered as a card showing the client name, contact number, requirement, estimated deal value, assigned owner, and next follow-up time. Summary tiles at the top of the screen surface key metrics at a glance: total leads, open opportunities, conversion rate, and expected pipeline revenue. Filters allow the sales team to narrow the view by lead source, owner, service type, priority, and date range, while a detailed side-panel (shown for the lead 'Amit Jain') exposes full contact information, a requirement summary, and a recent activity timeline for deeper case-by-case follow-up.

Figure 4.3: CRM - Lead Pipeline Board

4.8.1.2 Follow-Up Management ("My Follow-Ups")

The Follow-Up Management module (Figure 4.4) functions as the daily task queue for the sales and telecalling staff. It classifies every scheduled activity - calls, demos, WhatsApp follow-ups, proposal discussions, and payment reminders - into four states: Due Today, Overdue, Completed, and Upcoming, each backed by a live count and short contextual note (for example, completion rate or count of high-priority tasks). A detailed Follow-Up Queue table lists each task with its scheduled time, associated lead, type, purpose, status, priority, and quick actions (Call, Message, Reschedule, Done). Dedicated panels for "Today's Priority Queue" and "Overdue Follow-Ups" give supervisors an immediate view of what needs attention first, while a Quick-Add form allows new follow-ups to be logged without leaving the screen.

Figure 4.4: CRM - Follow-Up Management (My Follow-Ups)

4.8.1.3 Follow-Up Calendar

The Follow-Up Calendar (Figure 4.5) presents the same underlying follow-up data as a visual, month-view calendar, allowing sales managers to see the distribution of calls, demos, proposal reviews, and payment reminders across an entire month at a glance. Each date cell displays a compact count of follow-ups scheduled for that day, and selecting a date (illustrated for 9 July) reveals a detailed agenda listing every lead, purpose, scheduled time, activity type, and assigned owner for that day. Summary tiles for the month (total follow-ups, due today, overdue, and completed) and filters by owner, status, and activity type are retained from the Follow-Up Management module for consistency.

Figure 4.5: CRM - Follow-Up Calendar

4.8.1.4 Telecalling Workspace

The Telecalling Workspace (Figure 4.6) is the most detailed module of the CRM Portal, purpose-built as a single-screen productivity tool for an active telecaller. It combines a prioritized Call Queue, live counters for leads queued, connected, follow-ups scheduled, and conversions for the day, and - for the lead currently selected - a full working context: contact details, budget and service requirement, a structured Call Script (opening line, qualification questions, and objection-handling guidance), a Call Disposition selector (Interested, No Answer, Busy, Converted, etc.), a notes field, and a chronological history of previous calls and lead-timeline events. A Quick Follow-Up Scheduler and a set of Quick Actions (Send Brochure, Send Proposal, Mark Hot Lead, Move to Interested/Proposal) allow the entire call-handling cycle to be completed without switching screens.

Figure 4.6: CRM - Telecalling Workspace

4.8.1.5 Call Logs and Reports

The Call Logs and Reports module (Figure 4.7) provides a reporting and audit view over all telecalling activity. Summary tiles report total calls for the week, connected calls with connection rate, no-answer count, and average call duration. Two visual charts - Calls by Outcome and Daily Call Volume - give a quick read of team performance trends, complemented by a Top Agents leaderboard ranking telecallers by call volume. The Call Log Table at the bottom of the screen provides a complete, filterable audit trail of every call made, including call ID, timestamp, lead, phone number, agent, call type, duration, outcome, next action, and free-text notes, with export and manual call-logging actions available to supervisors.

Figure 4.7: CRM - Call Logs and Reports

4.8.2 HRMS Portal - Module-wise Description

The HRMS Portal was designed as an administrator-facing control panel for the organization's HR/Admin function, with a persistent sidebar navigation exposing seven modules. Five representative modules are described in detail below.

4.8.2.1 HR Operations Dashboard

The HR Operations Dashboard (Figure 4.8), titled internally as the "Executive Operations Control Room", is the landing screen of the HRMS Portal. It presents five key workforce metrics as summary tiles - Present Today, On Leave, Open Complaints, Absent Alerts, and Total Staff - giving the Admin an immediate organization-wide snapshot. Below the tiles, a Daily Attendance Log provides live check-in/check-out tracking per employee (illustrated for the intern, Aadish Jain, marked "On Time" with a 09:30 AM check-in), an Office Calendar Overview highlights the current month, a Complaint Box surfaces the latest open grievance ticket with a one-click "Mark as Solved" action, and a Broadcast Center allows the Admin to dispatch alerts to a selected department directly from the dashboard.

Figure 4.8: HRMS - HR Operations Dashboard

4.8.2.2 Attendance Controls

The Attendance Controls module (Figure 4.9) gives HR/Admin a comprehensive, filterable attendance-management console spanning four tabs - Attendance Dashboard, Balances Ledger, Live Status, and Daily Log. A Filter Hub allows attendance records to be narrowed by target month, date range, branch location (Barwani, Khargone, or Indore), department, and staff classification (Intern or Full-Time Employee). The resulting staff-personnel table (illustrated for a filtered set of six staff members) is designed to report present/absent/half-day counts, week-offs, unpaid leave, overtime categories, late-coming and early-leaving exceptions, and first-punch-in / last-punch-out times, with Import and Export actions for bulk attendance-log handling.

Figure 4.9: HRMS - Attendance Controls

4.8.2.3 Pending Requests

The Pending Requests module (Figure 4.10) consolidates three categories of employee-initiated requests that require HR/Admin action: Leave Requests, Reimbursements, and Complaints, accessible through an in-page tab switcher. The Leave Requests tab lists each application with employee name, department, requested duration and dates, a reason statement, and a status tag, alongside direct Approve/Reject controls for HR governance. The Reimbursements tab (illustrated for a travel-expense claim submitted by the intern, Aadish Jain) allows the claimed amount to be reviewed, edited if necessary, and approved or rejected by the Finance Desk. This design ensures that every pending HR action across the organization is visible and actionable from a single screen, rather than being scattered across manual registers.

Figure 4.10: HRMS - Pending Requests

4.8.2.4 Employee Notification Center

The Employee Notification Center (Figure 4.11) provides HR/Admin with a simple broadcast tool for internal communication. The Admin can target a specific employee or all employees, select a notification category (General Notice, Attendance Alert, Meeting Reminder, or Urgent Alert), compose a free-text message, and dispatch it with a single action. A Notification History section (positioned below the composer) is designed to retain a log of previously sent notifications for audit and reference purposes, ensuring that important communication - such as attendance alerts or policy reminders - reaches the intended staff members in a documented, traceable manner.

Figure 4.11: HRMS - Employee Notification Center

4.8.2.5 Employee Directory

The Employee Directory (Figure 4.12) serves as the master record of all staff in the organization, organized into seven detail tabs: Staff Details, Attendance Details, Bank Details, Salary Details, Leave Balances & Policy, Penalty & Overtime, and Permissions. The default Staff Details view lists each employee with their name, job title, employee ID, employment type, and date of joining, and can be filtered by branch and department. Add Staff and Update Staff actions allow HR/Admin to onboard new employees or maintain existing records, including branch and department assignment, directly from this screen - centralizing what would otherwise be scattered personnel records into a single, searchable master directory.

Figure 4.12: HRMS - Employee Directory

4.9 Expected Outcomes

The design and development of the CRM and HRMS portals during this internship is expected to deliver measurable benefits to IMPOST INDIA PRIVATE LIMITED, in addition to significant technical and professional learning for the intern. The anticipated outcomes are summarized below.

- Improved visibility for sales management into pipeline value, lead-source effectiveness, and conversion rates through the CRM's dashboard tiles and reporting charts.
- Reduction in missed or overdue follow-ups through the structured Due Today / Overdue / Completed / Upcoming classification in the Follow-Up Management module.
- Faster telecaller onboarding and more consistent call quality through the standardized call scripts and objection-handling guidance built into the Telecalling Workspace.
- Centralized, branch-wise visibility for HR/Admin into attendance, leave, reimbursements, and complaints across Barwani, Khargone, and Indore offices, in place of manual, disconnected tracking.
- A documented, auditable trail for HR approvals (leave and reimbursement) and internal grievance handling through the Pending Requests module.
- A reusable, three-tier system architecture (Section 4.7) that positions both portals for straightforward backend and database integration in a future development phase.
- For the intern personally, practical, hands-on experience in requirement analysis, UI/UX wireframing, responsive front-end development using HTML5, CSS3, Tailwind CSS, and JavaScript, and in structuring and documenting a real-world software project end-to-end.

4.10 Certificates of Completion and Other Communication / Mail Proof

The Internship Completion Certificate issued by IMPOST INDIA PRIVATE LIMITED, confirming successful completion of the internship as an Artificial Intelligence & Information Technology Intern from 5 June 2026 to 5 August 2026, is reproduced in full in the front matter of this report (page iii) and is additionally attached below as Figure 4.13 for ready reference within this chapter, in accordance with the report format requirements.

Figure 4.13: Internship Completion Certificate (Annexure)

The certificate is digitally signed by Mr. Prateek Jain, Managing Director and Authorized Signatory of IMPOST INDIA PRIVATE LIMITED, confirming that the intern's performance, dedication, and conduct during the internship period were found satisfactory.
